# User Input

- User input to a web page can be facilitated through three approaches:
  - `<a>` tags to provide hyperlinks
  - `<button>` tags to create buttons
  - `<form>` to create forms
    - `<input>` to create elements in forms

# Buttons

- Simple interaction
  - Clicking of the button
- Button behavior dependent on where it is positioned:
  - Inside a form it takes on specific role
  - General purpose outside
- `<a>` can also be styled using CSS to look like a button

# Forms

- Form elements:
  - `<input>`
    - type: text, password, submit, radio, checkbox, button, color, date, datetime, email, month, number, range, search, tel, time, url, week
  - `<textarea>`
  - `<button>`
  - `<select>`
